

# Puppy or Bagel?

Justin Pearson

2016-03-12

Based on Tweets from <https://twitter.com/teenybiscuit/media>

# Example

```
In[1]:= Clear["Global`*"];  
Import["https://pbs.twimg.com/media/Cc_Io2UUEAA0SP-.jpg"]
```

Out[1]=

## Can Mathematica tell the difference?

```
In[2]:= data =
(
  "puppy or bagel?"           "https://pbs.twimg.com/media/Cc_Io2UUEAAOSP-.jpg;
"labradoodle or fried chicken?" "https://pbs.twimg.com/media/CcL9aAYWwAEaJQ3.jpg;
  "duckling or plantain?"      "https://pbs.twimg.com/media/CURr0wqVAAAtyh9.jpg;
  "sheepdog or mop?"          "https://pbs.twimg.com/media/CdIm-TwUMAI-HLt.jpg;
  "chihuahua or muffin?"       "https://pbs.twimg.com/media/CdJavKoUAAAFLBG.jpg;
  "shiba or marshmallow?"      "https://pbs.twimg.com/media/CdTwyQdUIAA8gpC.jpg;
  "parrot or guacamole?"       "https://pbs.twimg.com/media/CdY2DYMUKAATHkk.jpg;
)
;
```

```
In[3]:= label[pic_] := ImageIdentify[pic]; (* THIS IS WHERE THE MAGIC HAPPENS *)
```

```
In[4]:= f[title_, url_] := (url // Import //
  ImageTake[#, -ImageDimensions[#][[1]]] & // (* crop top of image *)
  ImagePartition[#, ImageDimensions[#]/4] & //
  (* cut into a 4x4 grid of images *)
  Map[Labeled[#, label[#]] &, #, {2}] & // (* identify & label *)
  Grid[#, Frame -> All] & // (* format *)
  Panel[Column[{Style[title, 18], #}, Alignment -> Center]] &)
```

```
In[5]:= MapThread[f, data^T] // Column
```

puppy or bagel?

Guinea pig

soft pretzel

Rhodesian ridgeback

kaiser roll

bread

redbone

soft pretzel

canine

polar bear

donut

golden retriever

donut

donut

Rhodesian ridgeback

donut

bread dough

### labradoodle or fried chicken?

komondor

starches

Airedale terrier

bran muffin

toy poodle

bran muffin

poodle

croquette

croquette

toy poodle

buttermilk biscuit

terrier

bran muffin

Airedale terrier

buttermilk biscuit

toy poodle

duckling or plantain?

barbecued wing

gosling

barbecued wing

mantled ground squirrel

pallasite

Yorkshire pudding

domestic cat

pistachio nut

brown algae

gosling

yam

edible banana

yam

gosling

fish

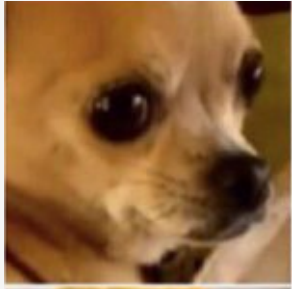

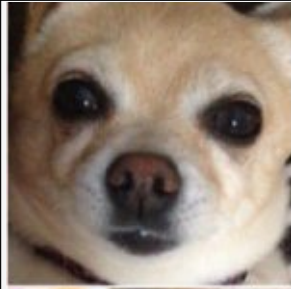

Angora rabbit

### sheepdog or mop?

 <p>komondor</p>	 <p>mop</p>	 <p>komondor</p>	 <p>mop</p>
 <p>mop</p>	 <p>komondor</p>	 <p>mop</p>	 <p>komondor</p>

 <p>@teenybiscuit Chihuahua</p>	 <p>hot cross bun</p>	 <p>Chihuahua</p>	 <p>brioche</p>

### shiba or marshmallow?

chow chow

flagon

chow chow

nose

popover

dingo

golden hamster

domestic dog

dingo

bootie

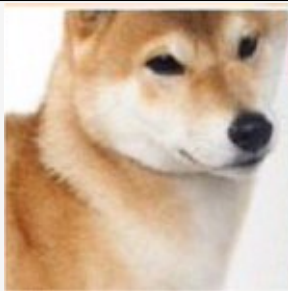

Pembroke Welsh corgi

kaiser roll

carnivorous mammal

dingo

golden hamster

chow chow

## Note

Different versions of MMA perform differently. Here's mine:

```
In[6]:= Print["Mathematica version: ", $Version]
Print["I ran this program on: ", Today]

Mathematica version: 11.1.1 for Mac OS X x86 (64-bit) (April 27, 2017)

I ran this program on:  Day: Fri 9 Jun 2017
```

## More informative labels

Sometimes MMA's default identifications are quite specific. What the hell is a "komondor"? It can be nice to know the "genus" (broader concepts) of a label. Here's a function for that.

```
In[8]:= broaden[e_Entity] :=
  (NestList[First[#["BroaderConcepts"]] &, e, 2] // Flatten // Reverse)
```

```
In[9]:= broaden[  ]
```

```
Out[9]= { , ,  }
```

```
In[10]:= show[elist_List] := Module[{e, f, g},
  {e, f, g} = elist[[1 ;; 3]];
  Row[{Style[e["Name"] <> "→" <> f["Name"] <> "→", FontSize → 10], g}]]
```

```
In[11]:= show@broaden[  ]
```

```
Out[11]= cracker→pretzel→ 
```

```
In[12]:= label = show@*broaden@*ImageIdentify;
Now run it again.
```

```
In[13]:= MapThread[f, data^T] // Column
```

puppy or bagel?

shrub→pepper→ <span>locoto</span>	bird→parrot→ <span>macaw</span>	condiment→dip→ <span>guacamole</span>	bird→parrot→ <span>Amazon parrot</span>

Future work: How to pick one of two options?

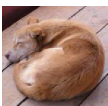

I want to restrict the identification to “puppy” or “bagel”. But it’s a pain to figure out how to say “bagel” in Mathematica.

```
In[14]:= ImageIdentify[, "bread" | "canine", SpecificityGoal -> 0]
```

```
Out[14]= canine
```

```
In[15]:= ImageIdentify[, "bread" | "canine", SpecificityGoal -> 0]
```

```
Out[15]= bread
```

```
In[16]:= ImageIdentify[, "bread" | "canine", 8, "Probability",  
SpecificityGoal -> 0, PerformanceGoal -> "Quality", RecognitionThreshold -> .8]
```

```
Out[16]= <| canine -> 0.991601, domestic dog -> 0.989945, hunting dog -> 0.983719 |>
```
